

SimforHealth was selected by the World Electronics Forum to present the “Health Simulation Center of the Future”.

“Virtual reality at the service of real collaboration”

Bordeaux (France), October 2017. After being selected at the **2017 CES in Las Vegas**, the Bordeaux company continues to gain recognition for its expertise in health care digital simulation by presenting, at the **World Electronics Forum in Angers** “the health care simulation center of the future”.

On the largest exhibition platform at this conference, which has become the unmissable meeting place for the new technologies sector, **SimforHealth** will welcome representatives of associations and industry leaders from across the world in the University Hospital of Angers to highlight the educational value of digital tools in the training of healthcare professionals. Also attending will be Gary SHAPIRO, sponsor of the event and CEO of the CES in Las Vegas, where [SimforHealth was selected last January](#).

In a room of nearly 600 ft², set up for the occasion in the health simulation center of the University Hospital and University of Angers, visitors of the “**Smart Health**” delegation will see how health training can take on a new collaborative role, with professors and students working in virtual reality on the same case, face-to-face or at a distance. Technologies such as HTC Vive **virtual reality** headsets and Microsoft HoloLens **mixed reality** glasses will be used for these demonstrations.

[MedicActiV](#), the first training platform via digital simulation, will also be showcased by immersive and collaborative 3D technologies: VR Uniit, mobile “all-in-one” kit for virtual reality, the Meetiim and Shariing collaboration table, a software solution for sharing, collaboration and presentation.
