Digital simulation in healthcare: SimforHealth's know-how presented at SESAM

Bilbao, June 27th 2018 – Recognized as one of the “4 e-health innovations” during its participation in the 2017 CES edition, SimforHealth is attending SESAM 2018 to present a new generation of simulator dedicated to healthcare training : a virtual reality simulator in multi-user mode developed with Stanford Medicine University.

“This time, you go ahead! I’ll let you give the local anesthetic. Take the syringe. I’ll watch.” Communication and discussion between health professionals, in the same place or at a distance, is now possible, thanks to the multi-user version of virtual reality clinical cases designed by SimforHealth.

The participant is immersed in an operating simulation in the role of an intern in medicine at the University of Stanford and, **working together with the instructor, will have to prepare for placement of a stent.** From the anesthesia to the operation, all steps will be guided by ultrasound.

Initially developed with the **Department of Vascular and Endovascular Medicine at Stanford and Dr. Oliver Aalami**, this model of collaborative clinical cases in virtual reality is a new advance in the development of **MedicActiV - an international platform for creation, consultation and distribution of virtual clinical cases**, dedicated to the training of health care professionals. With a large on-line library of simulators and clinical cases, available in virtual reality or computer/tablet format, learners can practice where and when they wish, either independently at a distance or face-to-face. Health care training establishments also have the possibility of creating and distributing their own clinical cases, thereby facilitating the sharing and spread of health care knowledge to address the challenges of accessing and updating this information.

Already being used by more than 40,000 health care professionals, the MedicActiV platform – www.medicactiv.com - is currently available as a **trial offer** to enable users to try out the full range of functionalities offered.

About SimforHealth

SimforHealth is a leading provider of innovative digital solutions for improving the training of healthcare professionals. The company works alongside faculties, medical schools, and training organizations to design immersive and interactive solutions for medical education and medical training: virtual consultations, real-time 3D simulators, and virtual reality... Continuously monitoring new technologies, SimforHealth's medical teams and simulation experts have already trained more than 40,000 healthcare professionals worldwide and are committed to the ethical principle of "Never the First Time with the Patient". In order to expand its business internationally and consolidate its growth, SimforHealth closed a round of € 5 million in early May 2016.
